## Alert Detail

Orta	CSP: Failure to Define Directive with No Fallback
Açıklama	The Content Security Policy fails to define one of the directives that has no fallback. Missing /excluding them is the same as allowing anything.
URL	<a href="http://localhost:4200/robots.txt">http://localhost:4200/robots.txt</a>
Yöntem	GET
Saldr	
Evidence	default-src 'none'
Other Info	The directive(s): frame-ancestors, form-action is/are among the directives that do not fallback to default-src.
URL	<a href="http://localhost:4200/sitemap.xml">http://localhost:4200/sitemap.xml</a>
Yöntem	GET
Saldr	
Evidence	default-src 'none'
Other Info	The directive(s): frame-ancestors, form-action is/are among the directives that do not fallback to default-src.
Instances	2
Solution	Ensure that your web server, application server, load balancer, etc. is properly configured to set the Content-Security-Policy header.
Reference	<a href="https://www.w3.org/TR/CSP/">https://www.w3.org/TR/CSP/</a> <a href="https://caniuse.com/#search=content+security+policy">https://caniuse.com/#search=content+security+policy</a> <a href="https://content-security-policy.com/">https://content-security-policy.com/</a> <a href="https://github.com/HtmlUnit/htmlunit-csp">https://github.com/HtmlUnit/htmlunit-csp</a> <a href="https://developers.google.com/web/fundamentals/security/csp#policy_applies_to_a_wide_variety_of_resources">https://developers.google.com/web/fundamentals/security/csp#policy_applies_to_a_wide_variety_of_resources</a>

Orta	Content Security Policy (CSP) Header Not Set
Açıklama	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Yöntem	GET
Saldr	
Evidence	
Other Info	
Instances	3
Solution	Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app.  If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively consider implementing Content Security Policy's "frame-ancestors" directive.
Reference	<a href="https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-Frame-Options">https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-Frame-Options</a>
CWE Id	1021
WASC Id	15
Plugin Id	10020

Düşük	Application Error Disclosure
Açıklama	This page contains an error/warning message that may disclose sensitive information like the location of the file that produced the unhandled exception. This information can be used to launch further attacks against the web application. The alert could be a false positive if the error message is found inside a documentation page.
URL	<a href="http://localhost:8081/api/vulnerable/login">http://localhost:8081/api/vulnerable/login</a>

Yöntem	GET
Saldr	
Evidence	HTTP/1.1 500
Other Info	
Instances	1
Solution	Review the source code of this page. Implement custom error pages. Consider implementing a mechanism to provide a unique error reference/identifier to the client (browser) while logging the details on the server side and not exposing them to the user.

Dük	Strict-Transport-Security Header Not Set

Açıklama	HTTP Strict Transport Security (HSTS) is a web security policy mechanism whereby a web server declares that complying user agents (such as a web browser) are to interact with it using only secure HTTPS connections (i.e. HTTP layered over TLS/SSL). HSTS is an IETF standards track protocol and is specified in RFC 6797.

<b>Düük</b>	<b>X-Content-Type-Options Header Missing</b>
Açıklama	The Anti-MIME-Sniffing header X-Content-Type-Options was not set to 'nosniff'. This allows older versions of Internet Explorer and Chrome to perform MIME-sniffing on the response body, potentially causing the response body to be interpreted and displayed as a content type other than the declared content type. Current (early 2014) and legacy versions of Firefox will use the declared content type (if one is set), rather than performing MIME-sniffing.

Instances	28
Solution	<p>Ensure that the application/web server sets the Content-Type header appropriately, and that it sets the X-Content-Type-Options header to 'nosniff' for all web pages.</p> <p>If possible, ensure that the end user uses a standards-compliant and modern web browser that does not perform MIME-sniffing at all, or that can be directed by the web application /web server to not perform MIME-sniffing.</p>

Bilgilendirme	Re-examine Cache-control Directives
Açıklama	The cache-control header has not been set properly or is missing, allowing the browser and proxies to cache content. For static assets like css, js, or image files this might be intended, however, the resources should be reviewed to ensure that no sensitive content will be cached.

URL	<a href="https://copilot.microsoft.com/c/api/user/eligibility">https://copilot.microsoft.com/c/api/user/eligibility</a>
Yöntem	GET
Saldr	
Evidence	
Other Info	
Instances	1
Solution	For secure content, ensure the cache-control HTTP header is set with "no-cache, no-store, must-revalidate". If an asset should be cached consider setting the directives "public, max-age, immutable".

Bilgilendirme	Retrieved from Cache
Açıklama	The content was retrieved from a shared cache. If the response data is sensitive, personal or user-specific, this may result in sensitive information being leaked. In some cases, this may even result in a user gaining complete control of the session of another user, depending on the configuration of the caching components in use in their environment. This is primarily an issue where caching servers such as "proxy" caches are configured on the local network. This configuration is typically found in corporate or educational environments, for instance.

Solution	<p>Validate that the response does not contain sensitive, personal or user-specific information. If it does, consider the use of the following HTTP response headers, to limit, or prevent the content being stored and retrieved from the cache by another user:</p> <p>Cache-Control: no-cache, no-store, must-revalidate, private</p> <p>Pragma: no-cache</p> <p>Expires: 0</p> <p>This configuration directs both HTTP 1.0 and HTTP 1.1 compliant caching servers to not store the response, and to not retrieve the response (without validation) from the cache, in response to a similar request.</p>

Bilgilendirme	Session Management Response Identified
Açıklama	The given response has been identified as containing a session management token. The 'Other Info' field contains a set of header tokens that can be used in the Header Based Session Management Method. If the request is in a context which has a Session Management Method set to "Auto-Detect" then this rule will change the session management to use the tokens identified.
